

ClassMate Release Summary

3/11/2025

Key User Stories and Acceptance Criteria

User Story	Acceptance Criteria
As a student who wants to connect to other students, I want an authenticated platform to find them	• Log in with an email and password. • Platform must be secure with proper authentication.
As a student who wants to find people with similar interests, I need to be able to showcase my interests	• Users must be able to add, edit and remove interests in a text field associated with their account • View others profile descriptions
As a student, I want to be able to store all of the classes I'm taking so that I can compare them with other students	• Ability to store classes in a global database. • Users classes are displayed on their profile
As a student studying for my classes, I want to find others in the same situation so we can study together	• Users can find groups for their classes in the explore page • Users can create groups for their classes and invite other members
As a student, I want to be able to send messages to discuss material and meet my study group	• Users can send messages within study groups. • Users can view messages others sent in a study group • Messages are persistent
As a student trying to create a study group, I want to be able to display my group to attract potential members	• Users can name and set a color to their study group • Users can set the class and description for their study group. • Users can upload an image for a study group
As a student, I want to easily find students to make study groups.	• Users can search study groups based on keywords

As a student, I want the option of knowing what my classmates look like before reaching out to them.	• Users can set, edit, and delete a profile picture. • Users can view other people's profile pictures
As a student, I want to be able to reach out to individual classmates to make study plans.	• Users can friend each other • Users can privately message friends • Users can remove friends
As a student, I want to be able to easily leave study groups after I'm done participating in them.	• Users can easily leave a study group once they have joined.

Known Problems/Bugs

- We are generally assuming perfect data from the user, and, as a result, have taken shortcuts around properly verifying user input in some cases. Some, but not all, of these issues are detailed below.
- Users can leave groups and cause an empty group
- Refreshing causes the user to be signed out of their account
- Changing profile picture (uploading a new image) does not delete the old image in the database, allows duplicates
- There is not proper authentication for messaging in the backend
- Classes are based on user input - there is not verification to make sure if a class actually exists or not
- There is no message to the user when they try to send a message longer than the cap - it just doesn't send
- The message UI overflows off the screen when sending a message of sufficient length.
- Searching for a friend without adding an email gets "Server error" message
- You can create a group with no associated class
- "Add a group description" cannot be interacted with
- No usage of SQL transactions, which could lead to race conditions and invalid reads/writes to the db when one endpoint executes multiple queries.
- Duplicate groups can be created with no distinguishing features (from user POV)

Product Backlog

- Require a minimum character count for account info fields
- Allow users to return to default profile picture
- Allow users to remove friends, possibly set up a request system
- Add a class and group schedule system to allow users to input class meeting times and group meeting times
- Pull class data from a college-specific endpoint
- Be able to search groups by group description
- Add the ability to delete, edit, and search messages
- Add frontend image support to groups
